

Real and Virtual image

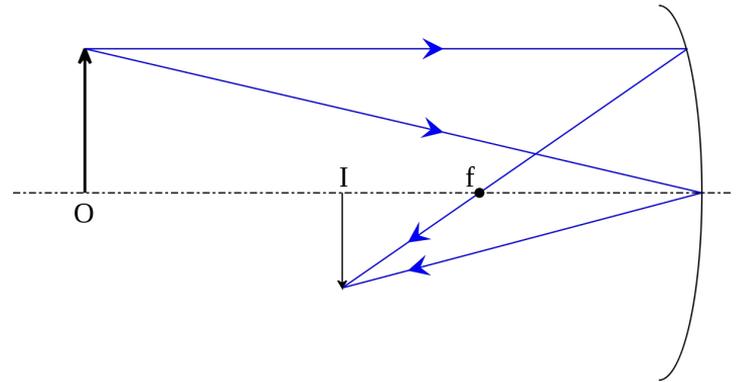

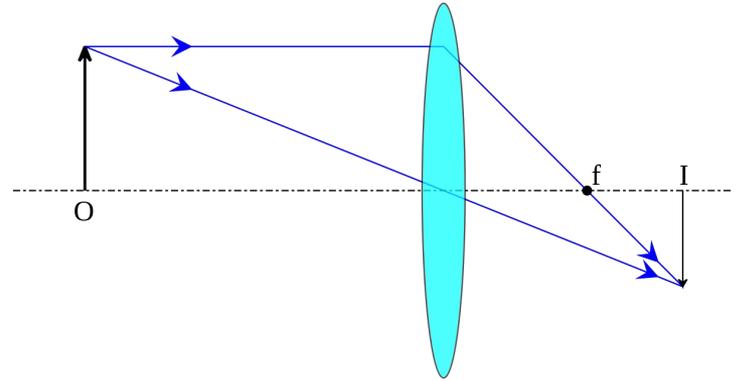

Teacher : Priti Shethia

Real image

After reflection or refraction, if the image formed can be seen on the screen then it is called real image.

Characteristics of real image ...

- It is upside down
- It can be projected on screen

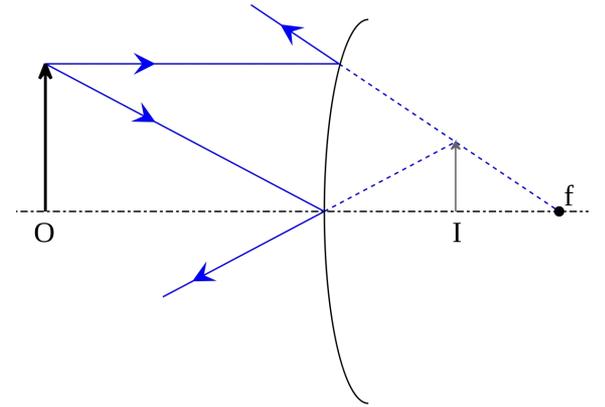

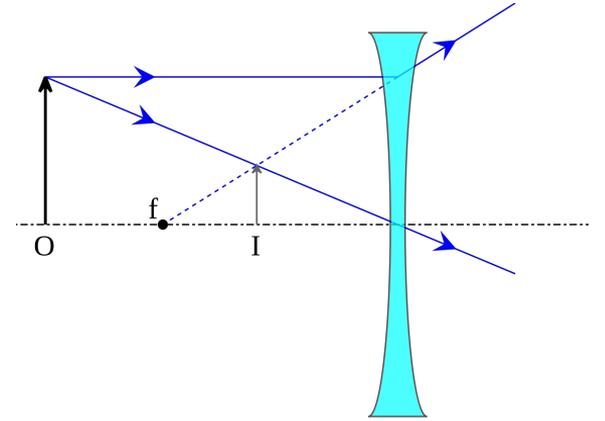

Virtual image

Image after reflection or refraction if cannot be projected on the screen, then it is called virtual image

Characteristics of virtual image

- It is erect
- It cannot be projected on the screen

Images 1 is virtual and image 2 is real
